CryptographyNet. Analysis

INTERESTS

- Automotive cybersecurity
- Hardware & embedded security
- Cars & motorsport
- Martial arts

PROFILE

17-year-old software developer and security researcher based in Reading, UK. I build low-level tooling in Go, C, and Rust across systems programming, networking, and security research. I have independently researched published CVEs and am currently studying Computer Science and Economics at A Level. Self-taught, technically focused, and a fast learner with a strong interest in how systems work at a fundamental level.

PROJECTS

C2 Framework Systems
Go · C · github.com/SaadSaid158/C2-Framework
Modular networked command system with cross-platform agents (Windows + Linux), Go server, multi-client CLI, OTA update system, and a full production build pipeline.

Fusée Gelée PoC CVE-2018-6242
Go · github.com/SaadSaid158/fusee-gelee-poc
Go implementation of CVE-2018-6242, a published hardware vulnerability in NVIDIA Tegra X1 chips affecting Nintendo Switch. Includes a TUI, payload management, SHA256 verification, and multi-device support.

Passman
Go · github.com/SaadSaid158/Passman
Offline-first secret manager with AES-256-GCM encryption and Argon2id key derivation. Encrypted vaults for credentials, TOTP secrets, and files — zero network surface.

Chess Engine
Go · github.com/SaadSaid158/chess-engine
Bitboard chess engine with iterative deepening alpha-beta search and perft validation. Browser UI and UCI mode front ends.

EXPERIENCE

Independent Researcher
Self-directed · 2023 – Present
Built and maintained 10+ public projects in security research, systems programming, and low-level development using Go, C, and Rust. Researched and reproduced published CVEs, built tooling for automation and networked operations, and practiced security techniques in legal lab environments. Designed and implemented full software systems independently from architecture through to deployment, including backend services, CLI tooling, encryption systems, and cross-platform agents. Strong at debugging complex systems, self-directed study, reading technical documentation, and writing clear findings.

Mechanic Assistant
Pickwell Auto Centre, Reading · 2025 – Present
Assisted with vehicle servicing, diagnostics, and inspections every week in a busy family garage. Worked on fault-finding, component replacement, and routine maintenance tasks alongside experienced mechanics, learning to diagnose both mechanical and electrical issues efficiently under time pressure. Built strong attention to detail, practical problem-solving skills, and the ability to stay focused and methodical in a fast-paced hands-on environment.

Office & Events Assistant
Abu Bakr Masjid, Reading · 2024
Assisted with general office administration tasks and supported the planning and organisation of a community trip. Gained experience in administrative coordination, written communication, and working as part of a team to meet deadlines. Developed confidence handling responsibilities in a professional setting.

LEARNING & DEVELOPMENT

OSAPS NEA
A Level Computer Science · 2025
Security automation and productivity system built as a full A Level CS NEA. Covers backend development, automation workflows, secure data handling, and systems integration across a large-scale software engineering project.

TryHackMe
Ongoing security practice
Consistent weekly practice covering enumeration, privilege escalation, web security, and network analysis on legal lab targets.

Self-study Curriculum
Networking · Cryptography · Security
Low-level topics including binary analysis, memory management, applied cryptography, and automotive cybersecurity (ISO/SAE 21434).
